

You're Invited:

"The Future Role of Government in Health IT and Digital Health"

Monday, March 19th

Since the enactment of the Health Information Technology Economic and Clinical Health (HITECH) Act in 2009, adoption of health information technology (IT) has become widespread, with about 90 percent or more of the nation's hospitals and physicians having adopted electronic health records (EHRs). At the same time, the field of digital health has exploded.

Health IT Now and BPC convened a broad-based work group to assess the current regulatory landscape, identify the most pressing needs of users, and develop consensus recommendations for the future role of government in this rapidly advancing field.

Join us as we share our recommendations and discuss ways to accelerate innovation and advance technology that supports higher quality, safer, patient-centered care.

Refreshments will be served

LOCATION: 902 Hart Senate Office Building

DATE: Monday, March 19th

TIME: Noon - 1:30 PM ET

RSVP: RSVP@HealthITNow.org

Speakers Include:

Joel White, Health IT Now | Janet Marchibroda, Bipartisan Policy Center |
